This is an overview of the actual book "How Not to Die." Kind of like an abbreviated Cliff's Notes for the full book. It provides a potential reader enough information regarding this book's content to determine if we want to invest the extra money and time to actually buy and read the entire book. With so very many books having been published over the last two decades on the potential impact of diet on personal health; this short analysis of the book gives an individual a good indication of whether there is enough new and original information to warrant their purchase of the book itself. It is also a sound example of why I have personally found "Instaread" to be a very helpful and valuable service.

I received this book in exchange for a review and really enjoyed it. This summary of "How Not to Die" will take you approximately 20 minutes to read. I hate that this may be taking sale away from "How Not to Die" by Michael Greger, who does so much good with his website [...] Please consider purchasing "How Not to Die" by Michael Greger before considering this book. How Not to Die: Discover the Foods Scientifically Proven to Prevent and Reverse Disease

Don't waste your money. Buy the real book by Dr. Greger, who spent two years researching and writing to bring you the best health information. Why would you pay these thieves who just want to benefit from someone else's labor?

Another great review by Instaread! This analysis and summary of "How Not to Die" captures the nutritional and lifestyle advice in a concise and motivating way. Greger's self-help book is driven by his experience as a doctor after noticing the lack of focus on nutrition in medicine. This Instaread review outlines "How Not to Die" into 12 key takeaways, making for a fast read. I especially liked the section on how poor diet is the leading cause of premature death and disability in the United States. A 2010 survey found that 27% of US medical schools met the required nutrition instruction set by the government. And five years later, that number only jumped to 29%. It's scary to think that the silent killer of malnutrition isn't addressed enough in medical schools, leaving our physicians incapable of training us as patients. I love Instaread reviews because they let me stay current with NYT Bestsellers, without taking over my life.
